

CONTRACT

EDIT A PREDEFINED BILLING BATCH

This functionality allows for easily creating predefined billing batches of optimal size and to schedule these batches which will be submitted via BPO Billing Batch Scheduler console application overnight, designed for high volume environments. The posting of the invoices to Evolution will be done via the existing PostingEngine application to prevent timeout errors on the Evolution database.

Refer to "The Billing Batch Listing Screen" on page 2 for more information relating to the process required for information to be processed by this application.

Items to be billed will be displayed on the left of the screen. You can select the parameters (Billing Day, Contract Type, Fees or Meters, Fee Types) to bill, then drag and drop them into an existing or new batch (on the right hand side of the screen).

Ribbon Access: Contract > Billing Batches

Select the Site

Your employee user record should be linked to a default site. In this case, the site will auto populate with this default, otherwise the site must be manually selected.

Another site can be selected, if required, and if you have the security rights to access the site.

If *All Sites* displays here, then you do not have a default site configured on your user record, and need to select the required site.
