

# **INVENTORY**

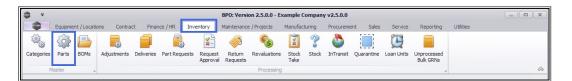

## PARTS - VIEW

A Part Definition is a way of classifying a part when dealing with inventory.

The **View Part** screen only allows you to <u>view</u> the information related to the selected Part Definition, no changes can be made or saved to the Part Definition information from this screen.

The View Part screen will differ slightly for a **C**-class part definitions compared to an **A** or **B**-class part definition. The differences are set out below.

**Ribbon Access:** Inventory > Parts

- 1. The *Part Listing* screen will be displayed.
- The data grid will contain all the A, B and C-class part definitions details in column form.
- 3. Scroll right to view the remaining part definition detail columns.

## VIEW A OR B-CLASS PART DEFINITION

- 4. Select the *row* of the **A** or **B**-class part definition where you wish to view more information.
- Check the *Part Type* column to ensure that you have selected an A or B-class part definition.
- 6. Click on View.

- 1. The View Part screen will open.
- 2. You will note that there is only a *Back* button on this screen. This is a <u>view only</u> screen and no changes can be made or saved.

#### **VIEW PART DEFINITION DETAILS**

3. On the left of the screen, are the part definition *details* fields which reflect the columns viewed in the previous *Part Listing* screen.

**All** of these fields are available for an **A** or **B-class** part definition.

- 4. As this is an **A**-class part definition, the *Part Type* is '*Serialised Equipment'*.
  - the Part Type for a B-class part definition would be Serialised Spares.

Note: For descriptions of these fields refer to Add Part Definition Details.

#### **VIEW PART DEFINITION INFORMATION PANELS**

- 5. On the right of the screen, are the part definition information panels:
  - ° Defaults
  - BOM Allocation
  - Part Meters
  - ° Yield Config

These panels are docked by default but can be unpinned according to your requirements.

#### **VIEW PART DEFINITION DEFAULTS**

- 1. Expand this panel to view all the information.
- The other 3 docking panels can be unpinned in order to view the Defaults panel fully.

#### Site Warehouse Defaults

- 3. This panel will be populated with a list of all the *site warehouses* that are linked to the part *category* selected in the part definition *Details* frame. These are the warehouses<sup>1</sup> and bins<sup>2</sup> available to receive this part definition from a supplier.
- 4. In this example, 3 site warehouses and bins are linked to this **A**-class part definition.
- Only **1** *primary* default warehouse and bin can be selected for each site.
   This will be the *default location* for this part as it is <u>GRN</u>'d into store.

#### **VIEW PART DEFINITION BOM ALLOCATION**

- 1. Expand this panel to view all the information.
- The other 3 docking panels can be unpinned in order to view the BOM Allocation panel fully.

- 3. This panel lists all the <u>Bill of Materials</u> definitions which are available to be linked to the selected part definition.
- In this example, 1 Project Methodology BOM is linked to the selected
   A-class part definition.

**Note:** More than one BOM can be linked to a part definition. A part definition can also exist without being linked to a BOM.

A **Bill of Materials** is a list of part definitions, with their quantities, used to define :

- a **Parent-child BOM**: Which parts and quantities are used to <u>make up a product</u>, e.g. the toners, rollers, drums and trays required in order to complete a certain machine.
- a BOM Inclusion: Which parts are <u>included</u> in a contract (and therefore not billed). e.g. a black toner is included in a monthly contract and should not be charged for separately, from the regular monthly contract fee.
- a **Task BOM**: Which parts are required to <u>perform a task</u>, e.g. a repair or overhaul of a machine.

#### **VIEW PART DEFINITION PART METERS**

- 1. Expand this panel to view all the information.
- The other docking panels can be unpinned in order to view the *Part Meters* panel fully.
- 3. This panel lists all the <u>Part Meter</u> definitions which are available to be linked to the selected part definition.
- 4. In this example, **3** part meters are currently linked to the selected **A**-class part definition.

Note: By linking one or more **part meter** definitions to a serialised **A**-class item, the defined meters will be automatically linked when the item is <u>GRN'</u>d into store. For example, if you link **Mono** and **Colour** meters to this **A**-class part definition, when you receive(<u>GRN</u>) this part into store - these two meters will be automatically linked to this part definition.

- 1. The *View Part* screen will open.
- 2. You will note that there is only a *Back* button on this screen. This is a view only screen and no changes can be made or saved.

#### **VIEW PART DEFINITION DETAILS**

3. On the left of the screen, are the part definition *details* fields which reflect the columns viewed in the previous *Part Listing* screen.

**All** of these fields <u>except</u> **Depreciation Method** are available for a **C-**class part definition.

4. As this is a **C-**class part definition, the *Part Type* is '*Non Serialised Parts*'.

Note: For descriptions of these fields refer to Add Part Definition Details.

#### VIEW PART DEFINITION INFORMATION PANELS

- 5. On the right of the screen, are the part definition information panels, these are docked by default but can be unpinned according to your requirements:
  - <sup>o</sup> Defaults
  - BOM Allocation
  - Part Meters\*
  - Yield Config

\* The **Part Meters** panel is not available for **C**-class part definitions as these part types do <u>not</u> have meters linked to them.
