EXCHANGE RATES

An exchange rate is the value of a nation's currency in terms of the currency of another nation or economic zone.

In order to use foreign currencies in BPO, the currencies must first be configured in BPO Configurator with the same codes as used in the corresponding financial system.

Exchange Rates must be manually updated in BPO in order for the required rate to apply.

Version Compatibility¹

Ribbon Access: Finance > Exchange Rates

UPDATE EXCHANGE RATES

- The **Currency Exchange Rate** listing screen will open, displaying the currently set Exchange Rates, for the currencies configured in the system.
