ACCOUNTS

ACCOUNT DRIVERS – STOCK ADJUSTMENT – INCREASE

An accounts driver is an event that will check the transaction you are busy with on Nucleus Service and verify whether there is a financial effect to be posted to Nucleus Accounts or Sage Evolution. Refer to the Account Driver Introduction manual for more information.

The example below is based on the Non-Segmented 'Base' General Ledger.

STOCK ADJUSTMENT – INCREASE (SAJI)

A stock adjustment increase will increase the stock position of a non-serialised item. When adjusting stock into the system, the stock account will be credited. The user must specify a 'contra account code'; i.e. stock adjustments, cost of sales, stationery, etc. which will be debited.

TRANSACTION POSTING

Dr/Cr	Description	Debit Amount	Credit Amount
Dr	Stock	100	
Cr	Contra Account		100

TRANSACTION SETUP

Dr/Cr	Entry description	Item target account	Value Type	Ignore Segment	Account code	Segment 1 Not used	Segment 2 Not used
SAJI: Stock adjustment increase – consumables. This driver is called when a user processes a stock adjustment in Nucleus Service for consumable stock that increases the stock position							
Dr	Stock control account	Yes	NVA-L	Yes	7700		
Cr	Stock adjustments	Yes	NVA-L	Yes	2500
