

ACCOUNTS

ACCOUNT DRIVERS - SERIALISED STOCK ADJUSTMENT - DECREASE

An accounts driver is an event that will check the transaction you are busy with on Nucleus Service and verify whether there is a financial effect to be posted to Nucleus Accounts or Sage Evolution. Refer to the [Account Driver Introduction](#) manual for more information.

The example below is based on the Non-Segmented 'Base' General Ledger.

SERIALISED STOCK ADJUSTMENT - INCREASE (TADI)

A serialised stock adjustment increase will increase the stock position of a serialised item. There may be a few reasons for this, namely. When adjusting stock into the system, the stock account will be credited. The user must specify a 'contra account code', e.g. Stock Adjustment account, which will be debited.

TRANSACTION POSTING

Dr/Cr	Description	Debit Amount	Credit Amount
Dr	Stock	100	
Cr	Contra Account		100

TRANSACTION SETUP

Dr/C-r	Entry descrip-tion	Item target account	Value Type	Ignore Seg-ment	Accoun-t code	Seg-ment 1	Seg-ment 2
						Not used	Not used
<p>TADI: Stock Adjustment increase – assets. This driver is called when a user processes a stock adjustment in Nucleus Service for serialised stock that increases the stock position.</p>							
Dr	Stock con-trol account	Yes	NVAL	Yes	7700		
Cr	Stock adjust-ment account	Yes	NVAL	Yes	2500		

TARGET ACCOUNT SOURCE

- **Contra Account:** As specified on stock adjustment
- **Stock Account:** Warehouse (Administration > System Configuration > Inventory Warehouses)
