VERSION RELEASE NOTES

BPO_BulkGRNManager Version List:

[\[1.0.0.2\]](#)

1.0.0.2 (04.03.2022 4:49 PM)

- **Release Priority:** High
- **Database Prerequisites:** BPO v2.5.0.8
- **Application Type:** BPO Supporting Application – Task Scheduled Console App

BPO_Bulk GRN Manager v1.0.0.2

- CR52 – A console application, run via the Windows Task Scheduler, to process the GRNs that have been saved to the holding tables and that were not processed within BPO. This occurs when the number of GRN items is greater than the value specified for config flag 'fldBulkGRNLimit'.
 - If there are any validation errors (especially duplicate serial numbers), the app will not process the GRN, but will list the all the items in the Unprocessed Bulk GRN maintain screen in BPO with the validation error for each item. The user can then edit and correct the serial numbers as needed.
 - Once all the items are valid and processed by the console application, an entry will be added into the

processing queue for the PostingEngine application to process to the financial system.

Rollout Details

- Install BPO_BulkGRNManager_V1.0.0.2_Setup_x64
- Setup a task in Windows Task Scheduler
