REPORTING

PULLING A REPORT IN BPO_EXPLORER

(BPO_Explorer has been replaced by the reporting functionality with BPOv2)

In addition to the same functionality as in BPO_Explorer, new features have been added to Reporting in BPO2.

You can now view a list of **Recently** and **Most Used** reports. You can also save changes to a report layout. For example, if a report is adjusted by a User to view only certain selected columns in a specific order as per their requirements, this report layout adjustment can be saved. These changes can be saved per individual User.
