FINANCE

DEBIT ORDER BATCHES – PROCESS BATCH

BPO can be used to process debit order payments. Receipting can be done automatically, or manually. For automatic receipting, the **Auto Receipt Debit Order** option must be selected in the [company configuration](#).

The relevant customers must have Payment Method where the **Code Type** is **DO** (Debit Order) configured.

Each contract invoice total will post as a receipt via the debit order driver IRCP (Dr Bank Account, Cr Debtors Control account).

If using Auto Receipt Debit Order processing - the debit orders are processed at the same time as the contract invoice(s).

If using Manual Debit Order Processing - the contract invoices are generated first, you can then review the debit orders, and the debit orders are only processed when the batch is saved.

Ribbon Access: Finance and HR > Debit Order Batches

- The **Debit Order Batches** screen will be displayed.

SELECT THE SITE

- Click on the drop-down arrow in the **Site** field and select from the menu, the site that you wish to work in.
 - In this example, **Durban** is selected.

Debit Order Batches - BPO: Version 2.1.0.36 - Example Company
