DIGITAL DOCUMENTS

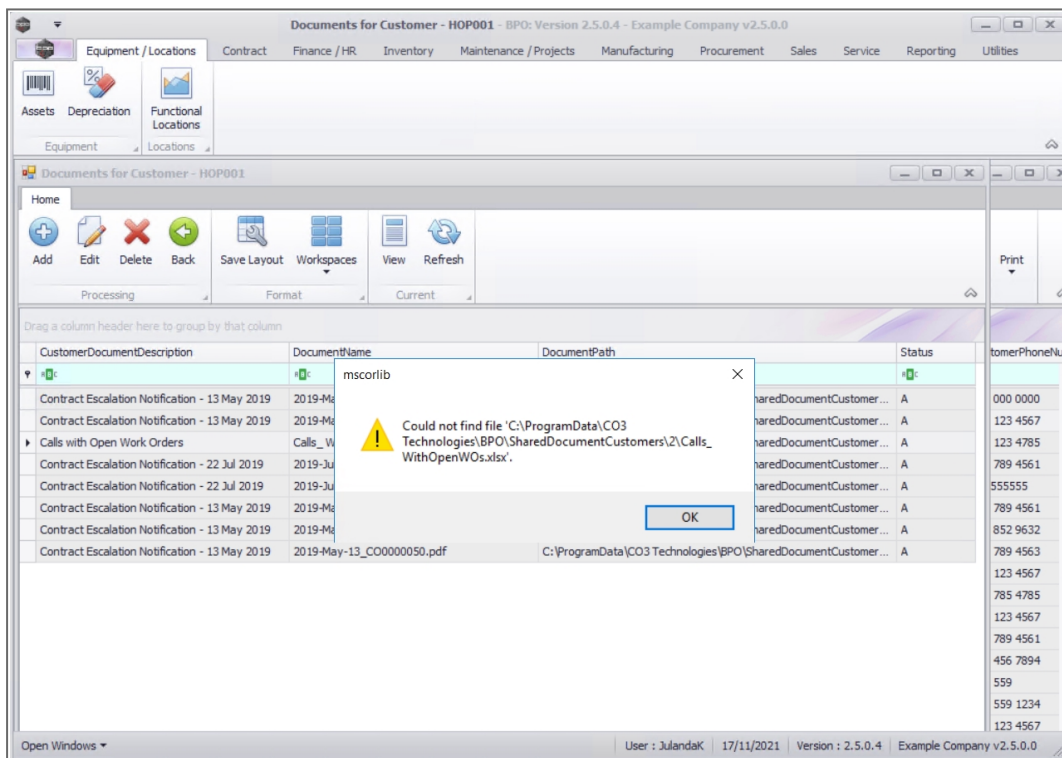

MSCORLIB - 'COULD NOT FIND FILE...'

When attempting to **edit** a digital document and the following error message occur.

mcorlib

Could not find file '[file path]'

This is primarily due to;

1. The document is not saved on a shared folder on the Server.
2. You may not have access to the shared folder on the Server where the documents reside.

Fix

- i. Contact your System Administrator at your Company to grant you access to the shared folder.
- ii. Ensure that documentation that needs to be linked is copied to a shared folder on the server and not on local work stations.
